

Highwood School—Year 2—Summer 1 –Plants

What?	How?
When seeds start to grow, this is called...	Germination
To germinate, seeds need:	<ul style="list-style-type: none"> • Warmth • Air (Oxygen) • Water
Seeds don't need light...	This is because they have a store of food inside them already.
What next?	Once the stem breaks through the soil, it is then a plant.

What?	How?
A Plant	A living thing that usually grows from the ground.
The main parts of a plant	
To grow and survive, plants need:	<ul style="list-style-type: none"> ◆ Light ◆ Water ◆ Carbon Dioxide <p>This is so they can make their own food.</p> <ul style="list-style-type: none"> ◆ Warmth <p>This is because if plants get too hot or cold then they will die.</p>
